

EE600

Differential Pressure Sensor

The EE600 is dedicated for accurate and reliable measurement of differential pressure in HVAC, building automation and filter monitoring applications. It is available as multi-range device with full scale 1,000 Pa (4 inch Water Column) and 10,000 Pa (40 inch WC). It can be employed for air as well as all non-flammable and non-aggressive gases. The piezo-resistive pressure sensing element provides outstanding long term stability.

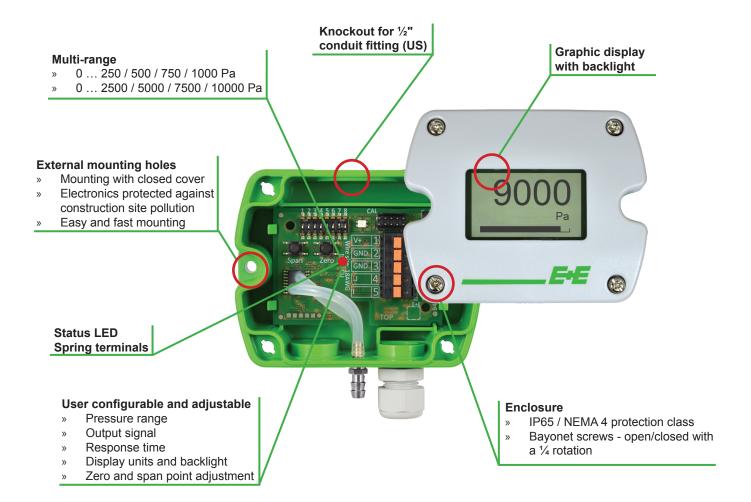

The measured data is available on the analogue output, whereby both voltage and current signals are available simultaneously at the spring terminals.

The IP65 / NEMA 4 enclosure minimizes installation costs. External mounting holes allow installation with closed cover, the electronics are thus protected against construction site pollution.

EE600 stands for full flexibility. Using DIP-switches on the electronics board, the user can select the pressure range, the output signal, the time constant as well as the units and the backlight of the large, graphic display. The user can easily perform a zero and span point adjustment with push buttons on the electronics board.
