

Carrington Flame Retardant Fabrics

Carrington is one of Europe's largest fully integrated textile processing and finishing operations, producing fabrics suitable for end-user applications across all industry sectors. Based in Lancashire, where the roots of British textiles began, the company is the largest producer of workwear fabrics in the UK. And is now Europe's leading supplier of flame retardant finished fabrics exporting to 70 countries worldwide.

We specialise in the development of fabrics and finishes that can provide exceptional levels of performance in the most demanding workplace environments. Working closely with Europe's leading garment manufacturers and rental laundries puts us in a unique position to monitor trends and demand.

Operational and environmental excellence is the driving force of our business and is supported by a continuous programme of investment in modern, environmentally sound production technologies of our manufacturing company Pincroft Dyeing & Printing Co. Ltd

Investment in technology and production goes hand in hand with ecology and sustainability. We have dramatically reduced the environmental impact of our fabric preparation, dyeing and printing and finishing processes. Operating one of the largest heat recovery systems of its type in the world, we utilise advanced effluent treatment technology to recycle chemical residues and minimise water consumption.

We have a long established international reputation for innovation and continue to introduce exciting new breakthroughs in workwear and technical fabrics. Our workwear range meets the stringent performance requirements encountered in such diverse areas as heavy industry, light engineering, food processing, retail, distribution, pharmaceutical, healthcare and defence. Our quality assurance systems cover every stage of fabric production and our methods and processes are certified to internationally recognised standards such as ISO and ETSA.

This is backed up by total customer support through our Sales offices in England, France, Germany, Asia and Central Europe - plus, agents and distributors across the globe.

For more information on our full range of fabrics, shades and technical specifications visit www.carrington.co.uk

Safety will always be the single most important factor. Whether it's the well-being of the workforce, or the protection of a process, we fully understand the risks and responsibilities that are involved.

More and more workers need protection not only to existing norms, but new norms anticipated in the coming years. With standards becoming increasingly global, a growing number of additional workers need protective garments - and existing markets are experiencing increased demand for multi-norm fabrics.

Technical fabrics that protect against specific hazards, or from multiple hazards including fire, heat, static electricity, sparks, metal splash, chemical splash, electric arc, crude and mineral oil, acid solutions, poor visibility, foul weather, wind and low temperature.

Part of our multi-norm developments includes our new Inherent Flame Retardant suite of products, which demonstrate our ability to anticipate the future in the increasingly demanding world of workwear. The winner in best Fabric & Fibre category at the Professional Clothing Awards, Flameban Max 310 Hi Vis Orange was the first FR product to market with GORT 3279 & Hi Vis Orange EN 20471 certification.

For the first time, comfort and safety is now introduced to this market sector which has previously been dominated by aramid-only fabrics.

Peace of Mind

Wherever there's risk we provide peace of mind - for wearers, for employers, and for garment providers.

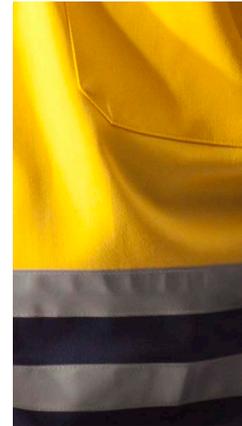

Working with garment manufacturers and rental laundries, we develop technical fabrics to meet their demands - from one of the most modern bleaching, dyeing, printing and finishing facilities in the world.

We are Europe's leading supplier of Flame Retardant finished fabrics for workwear. With decades of experience and specialisation, we meet evolving needs to create ranges that offer the ultimate protection.

Technical fabrics that meet Industry, European and Industrial Laundry standards - withstanding repeated wash and wear cycles and delivering enhanced wearer comfort, appearance and durability.

You can find all of Carrington's existing Flame Retardant and Inherent fabrics online under the Technical page at www.carrington.co.uk

Carrington's full range of Flame Retardant fabrics include:

- Flame Retardant fabrics
- Inherent fabrics
