The OMYL-T15 single channel and OMYL-T16 dual channel thermocouple input data loggers are new low-cost battery powered thermocouple data loggers with integral reference junction which delivers accurate readings over a wide temperature range. These data loggers are fully user programmable for Types J, K, T, E, R, S, B and N thermocouples and are available with standard memory of 100,000 readings (OMYL-T15, OMYL-T16) or expanded memory of 4 million readings (OMYL-T15-4M, OMYL-T16-4M). These devices are programmable so that you can log data from either one or two channels.

The storage medium is non-volatile flash memory so no data is lost if the battery becomes discharged. Data logger setup as well as data retrieval is accomplished using the included standard OMYL-SOFT software. Downloaded data is stored in the OMYL-SOFT software as a text file for viewing in third party software packages or Microsoft Excel. The OMYL-SOFT standard software does not include any graphing functionality. Graphing and analyzing downloaded data files requires the OMYL-SOFT-PLUS version of the software (sold separately).
